

The art of presentation technology.

Today's technology is changing, the planet is changing and our customers are being asked to produce events that make the biggest impact on their clients and shareholders with the least impact on the environment. For some 50 years, AVW-TELAV has set the standard for excellence in presentation technology solutions for events of all sizes. Today, more than ever, our consultative approach guarantees that you get the right solution to fit your needs. With the use of AV solutions—such as LED lighting, which consumes less electricity and produces more saturation and a wider variety of colour choices; webcasting, which contributes to environmental conservation by broadcasting your meeting or presentation to a nearly unlimited number of viewers over the Web; and simple décor enhancements, like picture-frame-style screen surrounds and self-supporting column structures that are minimal in energy consumption but give your meeting a distinctive look and feel—AVW-TELAV continues to execute the most innovative and buzz-worthy events in Canada while offering you a little more peace of mind.
